

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. It shows a view of the front of the studio.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. It shows a view of the back of the studio.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. It shows a video tape recorder, video monitors, vectorscope, and some of the associated equipment used in the control room.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. It shows additional video tape recorders, video monitors, camera controls, character and graphics system, video switcher, and some of the associated equipment used in the control room.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. It shows a close view of the audio console used in the control room.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. It shows another view of the control room and additional audio equipment and video tape storage. Also, two older-vintage video tape recorders are being stored here.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. The satellite receivers, video tape recorders, and video monitors shown here are used for receiving and programming some satellite network distributed programming.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. This is a general view of the master control area. It shows video tape recorders, video monitors, a computer, and associated equipment.

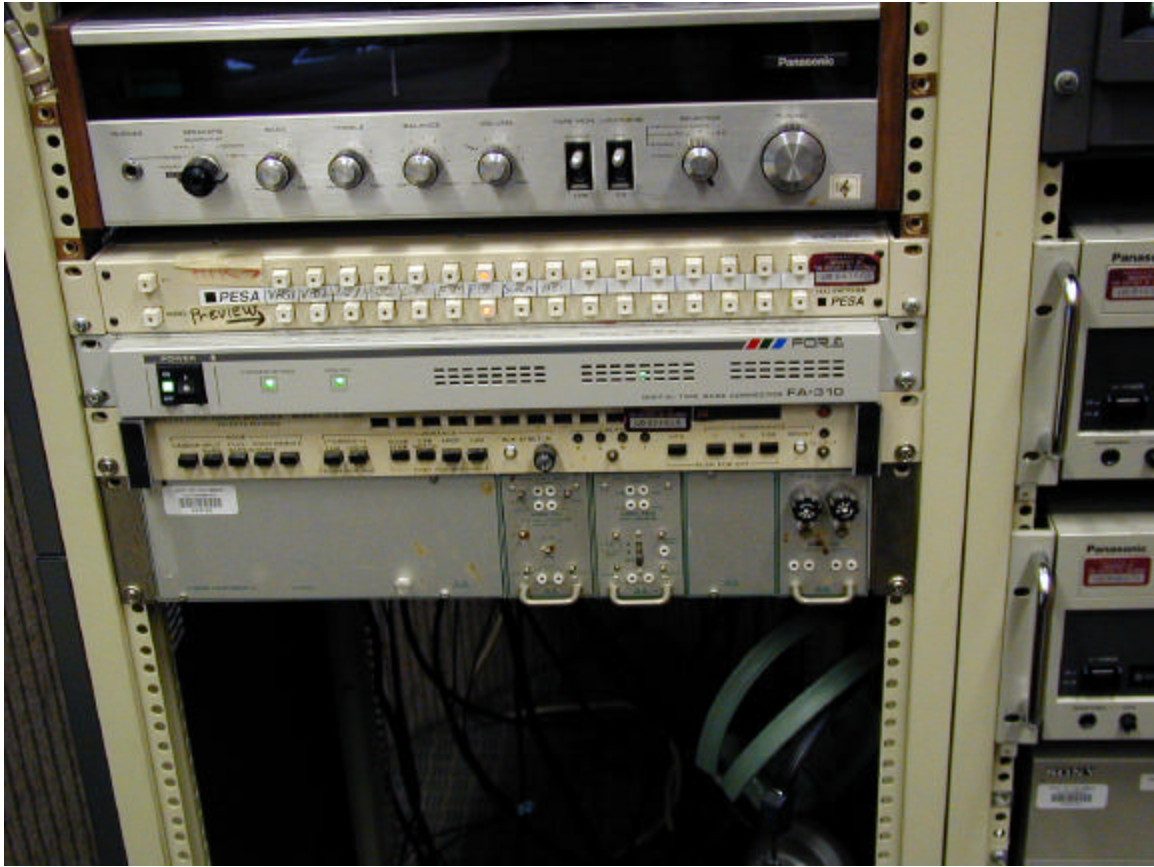

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. This closer view of the rack-mounted equipment in the master control area provides a better view of the video monitors, video tape recorder, time base corrector, fiber optic transmitter, and associated equipment.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. This closer view of rack-mounted equipment in the master control area is provided to show the Wavelink fiber optic transmitter used to transmit programming over the Bell Atlantic leased link to the Headend.

The above photograph was taken at the UDC television production facility located at 4400 Connecticut Avenue, NW on October 25, 1999. This closer view of some of the rack-mounted equipment in the master control area is meant to show the time base corrector and synchronization generator being used in this facility.
